

Raw materials - applications - process engineering

The 47th Munich Adhesives and Finishing Symposium (MKVS) will take place from 17-19 October at The Westin Grand Hotel Munich. C2 looks ahead to the traditional event, which will again be offered as a hybrid platform this year

The MKVS organisers at Hinterwaldner Consulting have a clear message: “We keep planning so you can keep planning too!” For many participants as well as tabletop exhibitors, the time of preparations and planning is currently starting. No change in the calendar – the MKVS will take place as planned with maximum health and safety measures, supported by the Westin conference hotel team.

Hybrid platform

Adapted to the impact of the pandemic, the 47th Munich Adhesives and Finishing Symposium 2022 will be organised – as last year – as a hybrid platform and networking event. The MKVS Hybrid combines a “live on-site” component with a “virtual” online offering. A physical event with the atmosphere

In October 2022, MKVS will once again invite the industry to Munich

of a conference and a simultaneous digital event that still offers participants the opportunity to interact with everyone else.

With live web streaming as well as recording of the conference presentations, there will be the possibility of a video-on-demand after the symposium for all registered participants via the conference website.

Focus on hot melt adhesives

This year, the Munich Adhesives and Finishing Symposium will focus on hot melt adhesives, covering the full range from raw materials, applications to process technology for and in all adhesive systems and application techniques involved (hot melts, pressure sensitive adhesives, and extrudable films) as well as the corresponding technical and machine equipment.

The topics of the programme, which is now fully available online, are divided into five sessions and cover all areas of bonding, printing and finishing, including business strategies, materials, processes, design, legislation and regulation, sustainability, research, development and innovation – predominantly in paper, plastic and film applications, self-adhesives, packaging and labelling applications, tapes & labels, coating & laminating, as well as nonwovens-related applications.

The 2.5-day independent technical conference and networking event will again be rounded off with a small tabletop exhibition, with exhibitors including Frans Vermeë, Heraeus, Keyser&Mackay, Kraemer Resins, Kraton Pine Chemical, Lanxess, Morchem and Rocholl. ■
