A RELEASE LINER MANUFACTURER'S PATH TO SUSTAINABLE SOLUTIONS FOR THE PRESSURE SENSITIVE MARKET

This presentation illustrates how Mondi is implementing sustainable solutions into release liner manufacturing. Different aspects from product development of more sustainable products up to the recycling of production- and customer waste are covered.

The talk will demonstrate how we made sustainability the core of our business, by implementing the Mondi action plan. The Mondi action plan - MAP2030 focuses on circular driven solutions, created by empowered people, taking action on climate to enable Mondi to have the most positive impact through the business. Following this path, Mondi has implemented several measures to make release liner manufacturing more sustainable.

Mondi offers Product Impact Assessment-Studies for Release Liners since 2020. The presentation will illustrate how our customers benefit from a detailed evaluation of sustainable solutions through the use of this tool.

Furthermore, we have installed an inhouse recycling lab to accelerate the evaluation and development of sustainable solutions.

Some of the solutions for Pressure Sensitive Applications will be showcased and different recycling initiatives will be introduced during this presentation.
